ABOUT MYSELF

Software developer with a strong analytical mindset and a clear focus on **backend engineering**, **artificial intelligence**, and **big data**.
I represented my institute in the national **ProgramaMe 2024 and 2025** finals in Madrid, achieving **4th place**, which reinforced my problem-solving abilities and competitive drive.
Currently building **ProString Manage**, a SaaS platform for racket stringing workshops and tournament management, a production system handling Stripe billing, real-time data sync, automated printing, and role-based access across 31 features.
I am also pursuing a **Master's in Artificial Intelligence and Big Data** at Linkia FP, expanding my expertise in machine learning, predictive modeling, big data architectures, and cloud technologies.
Co-developer of **Facts: News AI Summary**, an Android + Python solution with an end-to-end ETL pipeline for scraping, clustering, and generating neutral news summaries, currently paused but planned to continue.
I aim to deliver scalable, high-impact backend and data-driven solutions that integrate **cloud infrastructure, machine learning, and clean software engineering principles**. I actively leverage **AI-assisted development tools** to accelerate workflows, improve code quality, and maintain clean, well-structured codebases.

EXPERIENCE

ProString **May 2026 - Present**
Junior Full Stack Developer *Remote*
https://prostringmanage.com/
Design, development and implementation of a SaaS web application for racket stringing workshops and tournament management, combining a Vue 3 + Vite frontend with a serverless Supabase backend.
- Engineered a dual-mode architecture (Tournament / Shop) with 23 Pinia stores, 45 views, 265+ components and 67 composables in Vue 3 + TypeScript
- Enforced data isolation with Row-Level Security policies scoping access to tenant/role, with server-side price validation and atomic operation guarantees
- Implemented mode & role-based access control across 2 modes, 3 roles, and 31 features with 134 granular permissions
- Developed and deployed ~60 PostgreSQL RPC functions and Supabase Edge Functions covering user lifecycle, authentication flows, automated sync, email delivery, and demo tenant provisioning
- Leveraged Supabase Realtime subscriptions with PostgreSQL for live data updates across tournament and shop management flows
- Integrated QZ Tray and ESC/POS for automated receipt and label printing, bypassing the browser print dialog, with custom design editors for print layouts
- Built a robust data import pipeline with column auto-detection, split detection, catalog deduplication, and confidence scoring for new vs existing product matching
- Optimized read efficiency through store-level caching with Supabase Realtime - data fetched once on load and re-queried only on actual DB events
- Implemented subscription billing with Stripe across 4 plans and GRSA member discounts
- Delivered full internationalization in 6 languages with per-tenant translation override system

Confidential Company **Feb 2026 - Mar 2026**
Junior Python Developer *Remote*
- Development with Python of a SaaS service hosted on Google Cloud with the use of Artificial Intelligence
- Analyzed and optimized the algorithm for linking news articles, improving its accuracy and reducing matching errors.
- Migration of file processing from frontend to backend in GCP, reducing failures due to load limits/timeout/CORS and improving system stability.

Eulix **Oct 2024 - Apr 2025**
Junior Android Developer *Barcelona*
Development of an application with the objective of recommending content (movies, series), based on the user's personality, mood and preferences.
- Developed a chatbot (Virtual Assistant) for onboarding and 'How It Works' section, enhancing user engagement and support.
- Designed and enhanced the UI across all app screens, driving continuous UX improvements through iterative design ideas.
- Integrated RESTful API with Retrofit in collaboration with the back-end team, ensuring seamless data exchange and application functionality.
- Coordinated with an international team in India, facilitating effective communication and project alignment across different time zones.

TELUS Digital **Jul 2023 - Jan 2025**
Data Analyst / Data Annotator *Remote*
- Classified, evaluated, and described queries, audio, video, images, and other data types to ensure relevance and quality

- Applied professional English, general knowledge, and digital literacy to enhance the accuracy and contextual understanding of content across different task types

PROJECTS

Facts: News AI Summary App Page **Dec 2024 - Present**

- Application with an ETL flow that generates neutral news, combining diverse powerful technologies for the backend: Scraping, XML parsing, ML algorithms for embedding and clustering, use of text generation APIs, among others.
- Implemented periodic semantic clustering of news articles sourced from the RSS feeds of more than 10 Spanish media outlets.
- Built a robust system to ensure the generation of neutral versions for clusters of semantically grouped news.
- Developed both a solid and complex backend and a user-friendly Android application (November/December release on the PlayStore)

EDUCATION AND TRAINING

Linkia FP **Feb 2026 - Dec 2026**

Master's, Artificial Intelligence and Big Data

- **GPA:** 9
- **Coursework:** Artificial Intelligence Programming, Machine learning systems, Applied Big Data, Artificial Intelligence Models, Big Data systems, Artificial Intelligence and Big Data Project

Institut Tecnològic de Barcelona **Sep 2023 - May 2025**

Higher Vocational Degree, Multiplatform software development (DAM) - Intel·ligent Systems

- **GPA:** 9.08/10
- **Achievements:** Represented the institute in national competitive programming competitions, in 2024 and 2025 in a team of 3.
- **Coursework:** Programming Fundamentals, Android applications development, Web development, Client-Server communication, SQL and NoSQL database management, Data Analysis and Visualization, Development in groups following Agile methodologies

TECH SKILLS

Programming languages: Python, Java, TypeScript, Kotlin
Android: Android SDK, Jetpack, Compose, XML ViewSystem, Datastore, Room, Gradle, Coroutines, Hilt, Dagger, DAO, LiveData, MVVM, Retrofit
Back-end: GCP, Cloud Functions, Cloud Scheduler, Firebase, CI/CD, Docker, FastAPI, MongoDB, SQL, PostgreSQL, NoSQL, NodeJS, RESTful API, Ktor, SOQL, Postman, Node.js, Supabase, Serverless, RLS
AI / Data: ETL, Scraping, Crawling, Parsing, BeautifulSoup, Generative AI, Pandas, NumPy, NLP, Clustering, Google Colab, Jupyter Notebooks, Data Visualization, Matplotlib, Scikit-learn, Predictive Modeling, Classification Algorithms, OCR, YOLO, Transformers
Front-end: React, TailwindCSS, HTML, Next.js, CSS, UX, UI, Vue 3
Methodologies: Clean Architecture, SOLID principles, Agile, Scrum, Kanban, Git, Github, Jira, Proofhub, Trello
Learning (Data & ML): R, N8N, Keras, TensorFlow, PySpark, Flask, Power BI, Grafana, Prometheus, Hadoop, Kafka, RAG, Polars, Databricks

LANGUAGES

- Spanish(Native)
- Catalan(Native)
- English(C1)
- German(A1)
