PROFESSIONAL SUMMARY

Developer with a strong analytical mindset, focused on **applied AI software engineering and agentic development**. Core stack: **Python, TypeScript, Vue, Supabase (PostgreSQL)** and **LLM APIs**. Solo developer of **ProString Manage**, a multi-tenant SaaS platform for racket stringing workshops and tournament management: a production system handling Stripe billing, real-time data sync, one-click printing, an optimized UX for live tournaments and role-based access with MFA across 29 features. Pursuing a **Specialization in Artificial Intelligence and Big Data** (machine learning, predictive modeling, big data architectures, cloud). Co-developer of **Facts: News AI Summary**, an Android + Python solution with an end-to-end ETL pipeline for scraping, clustering and generating neutral news summaries (currently paused). 4th place in the national ProgramaMe 2024 and 2025 finals (Madrid). I build through a custom **agent harness** of subagents, skills and persistent memory.

WORK EXPERIENCE

Applied AI Junior Developer | ProString

Remote | May 2026 - Present | prostringmanage.com

Own product, built solo: multi-tenant SaaS for racket stringing workshops and tournament management (Vue 3 + TypeScript frontend, serverless Supabase backend).

- Engineered a **dual-mode (Tournament / Shop) architecture** with 23 Pinia stores, 45+ views, 230+ components and 70+ composables in Vue 3 + TypeScript.
- Enforced tenant/role data isolation with **180+ Row-Level Security policies**, server-side price validation and atomic operations, **TOTP MFA with AAL2 enforced at the database level**, rate-limited Edge Functions, HMAC-hashed PINs and an enforced CSP verified end-to-end with Playwright.
- Implemented **RBAC across 2 modes, 3 roles and 29 features with 130+ granular permissions**.
- Built a serverless backend of **23 Deno Edge Functions and 80+ transactional PL/pgSQL RPCs** covering user lifecycle, authentication flows, email delivery, demo provisioning and **automatic tenant provisioning via Stripe webhooks** (4 plans, GRSA member discounts).
- Implemented **invoicing**: server-allocated consecutive invoice numbers (series row locks), **immutable issued invoices** enforced by database triggers with rectificative-invoice corrections, and invoice formats for 7 countries.
- Developed **data pipelines**: scheduled weekly ingestion of external public datasets into Postgres with **pg_cron** and Edge Functions, a **configurable report engine** (pivot, aggregations, permission-based scoping), retention-based snapshots with restore, and an import pipeline with column auto-detection, split detection, catalog deduplication and **confidence scoring** for new vs existing product matching.
- Delivered **optimized UX for live tournaments**: keyboard-first order entry with **auto-jump between fields**, **one-click receipt/label printing** via QZ Tray and ESC/POS (no browser print dialog) with custom design editors, and **Supabase Realtime** sync with store-level caching (data fetched once, re-queried only on DB events).
- Maintained quality and observability with 1,500+ automated tests, **8 GitHub Actions CI/CD workflows**, from-scratch migration validation and client/server error capture; localized the UI in 6 languages with a per-tenant translation override system.
- Built a custom **agent harness**: subagents, skills and hooks, token-cost reporting per release gate and persistent memory; integrated **7 MCP servers** (Supabase, GitHub, Stripe, Context7, Chrome DevTools, Hostinger, Laravel Boost) under least-privilege access (project-scoped and read-only tokens) for live-state inspection, docs lookup and UI verification.
- Drive the product roadmap by combining **LLM-assisted competitor analysis** (structured feature comparisons, gaps and next-step insights) with my own ideas and interpretation; in progress: **RAG assistant** hardened against prompt injection, **LLM-assisted data import and analytics generation** on top of the report engine, **Python pipelines** that scrape and aggregate public sources (player rankings, racquets, brands, models, products), and automated player notifications (PWA portal).

Junior Python Developer | Confidential | AI News SaaS

Remote | Feb 2026 - Mar 2026

- Developed Python services for an AI-powered SaaS hosted on Google Cloud.
- Analyzed and optimized the news-linking algorithm, improving accuracy and reducing matching errors.
- Migration of file processing from frontend to backend in GCP, reducing failures due to load limits/timeout/CORS and improving system stability.

Junior Android Developer | Eulix
Barcelona | Oct 2024 - Apr 2025
Application that recommends content (movies, series) based on the user's personality, mood and preferences.

- Developed a chatbot (Virtual Assistant) for onboarding and the 'How It Works' section, enhancing user engagement and support.
- Designed and enhanced the UI across all app screens, driving continuous UX improvements.
- Integrated a RESTful API with Retrofit in collaboration with the back-end team, ensuring seamless data exchange.
- Coordinated with an international team in India across different time zones.

Data Analyst / Data Annotator | TELUS Digital
Remote | Jul 2023 - Jan 2025

- Classified, evaluated and described queries, audio, video, images and other data types to ensure relevance and quality.
- Applied professional English, general knowledge and digital literacy to improve the accuracy and contextual understanding of content across task types.

PROJECTS

Facts: News AI Summary
Dec 2024 - Present (paused) | getfacts.app

- Application with a **Python ETL flow** that generates neutral news: scraping, XML parsing, **ML embeddings and clustering**, and **text generation APIs** in the backend.
- Implemented periodic semantic clustering of news from 10+ Spanish media RSS feeds and generation of neutral versions for each cluster.
- Developed both the backend and an Android application.

EDUCATION

Specialization, Artificial Intelligence and Big Data | Linkia FP
Feb 2026 - Dec 2026 (expected) | GPA: 9

- Focus: **AI engineering and agentic development** on top of ML and big data foundations.
- Hands-on: CNNs (TensorFlow/Keras, PyTorch); house-price models (XGBoost, grid search) served via Flask API; capstone in progress (regression and clustering on 540K e-commerce records).
- Coursework: Artificial Intelligence Programming, Machine Learning Systems, Applied Big Data, Artificial Intelligence Models, Big Data Systems, Artificial Intelligence and Big Data Project.

Higher Vocational Degree, Multiplatform Software Development (DAM) - Intelligent Systems | Institut Tecnològic de Barcelona
Sep 2023 - May 2025 | GPA: 9.08/10

- Achievement: **4th place** at the national ProgramaMe competitive programming finals (Madrid), representing the institute in 2024 and 2025 in a team of 3.
- Coursework: Programming Fundamentals, Android and Web Development, Client-Server Communication, SQL and NoSQL Databases, Data Analysis and Visualization, Agile Group Development.

SKILLS

Programming Languages: Python, TypeScript, Java, Kotlin, SQL, PL/pgSQL
Back-end & Cloud: Supabase (PostgreSQL, Row-Level Security, Realtime, Edge Functions), GCP, Cloud Functions, Docker, Docker Compose, FastAPI, pg_cron, Deno, Node.js, RESTful APIs, Serverless, Firebase, MongoDB, Stripe
AI & Data: Generative AI, LLM APIs (OpenAI, Gemini, OpenRouter), RAG, LangGraph, Prompt engineering, Embeddings, Sentence-BERT (sentence-transformers), Hugging Face Transformers, NLP, K-means clustering, MCP (Model Context Protocol), AI-assisted development, Claude Code, ETL, Scraping, Parsing, BeautifulSoup, Pandas, NumPy, Scikit-learn, Predictive Modeling, Classification Algorithms, Data Visualization, Matplotlib
Front-end: Vue 3, Pinia, Vite, React, Next.js, TailwindCSS, HTML, CSS, ECharts, Zod, UX/UI
Android: Android SDK, Jetpack Compose, Room, DataStore, Coroutines, Hilt, MVVM, Retrofit, Gradle
DevOps & Testing: CI/CD, GitHub Actions, Git, GitHub, pytest, Vitest, Playwright
Methodologies: Clean Architecture, SOLID principles, Agile, Scrum, Kanban, Jira, Trello, Proofhub
Learning (Data & ML): LLM evaluation, OCR, YOLO, PySpark, TensorFlow, Keras, Kafka, Hadoop, Databricks, Polars, Power BI, Grafana, R

LANGUAGES

Spanish (Native), Catalan (Native), English (C1), German (A1)
